

SYSTEM DESIGN

Every module is connected through shared institute master data.

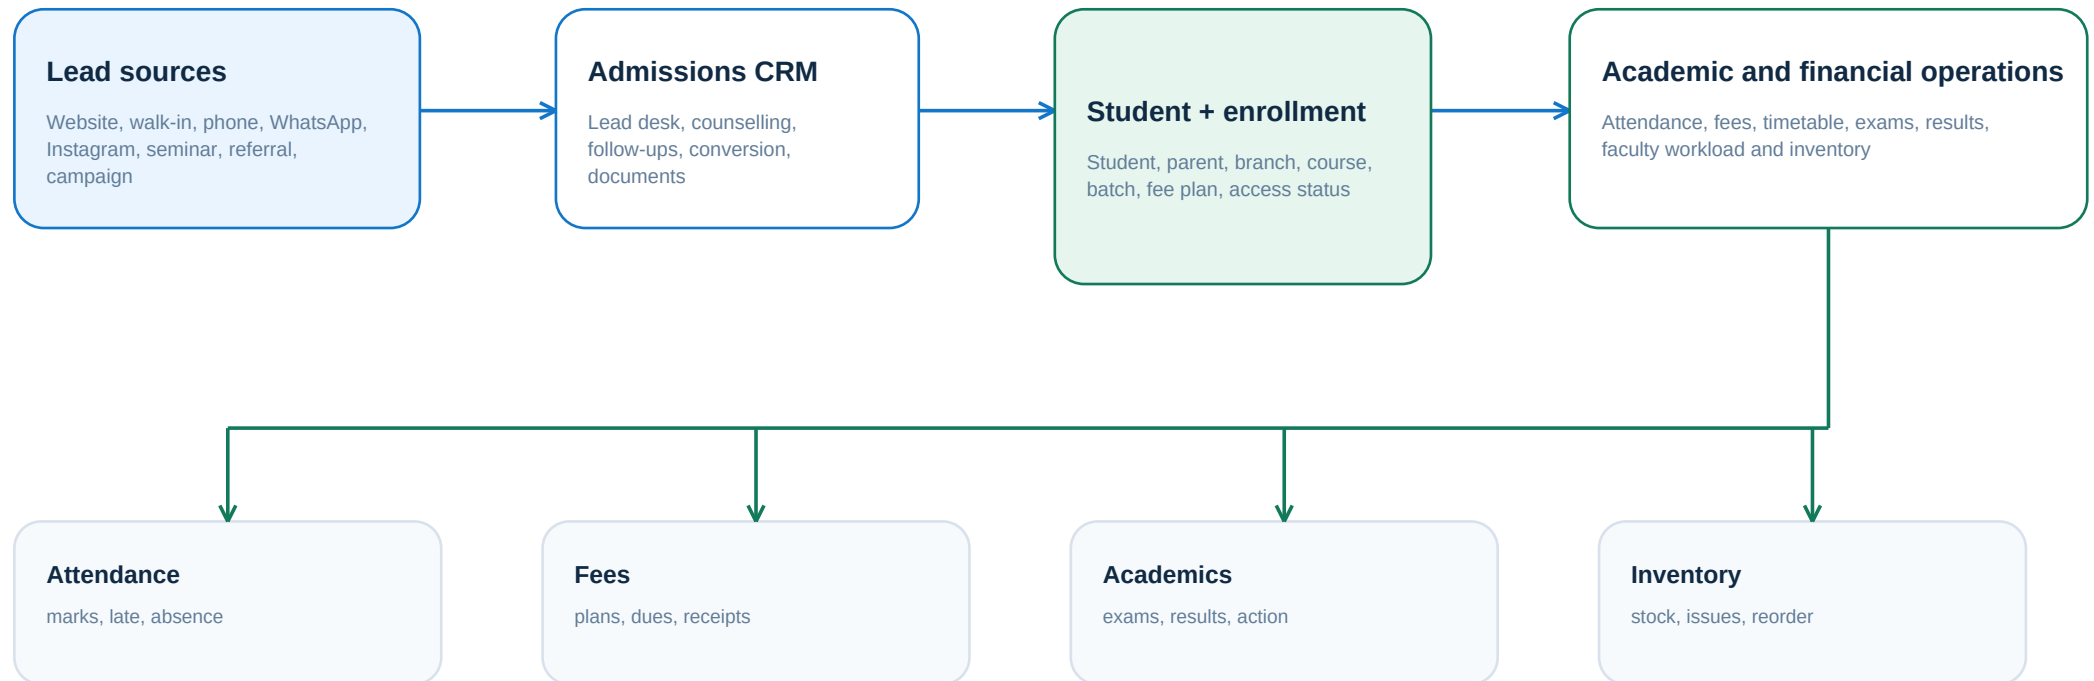

The application is built as a modular ERP: each team gets its own workspace, while shared lead, learner, batch, finance and stock data keeps operations aligned.

JOURNEY ENTRY

ADMISSIONS

CENTRAL RECORD

DAILY OPERATIONS

Operations feed family communication, leadership reporting and the parent experience.

Communication Hub

WhatsApp, SMS, notices, logs

Owner Reports

funnel, cash flow, stock, performance

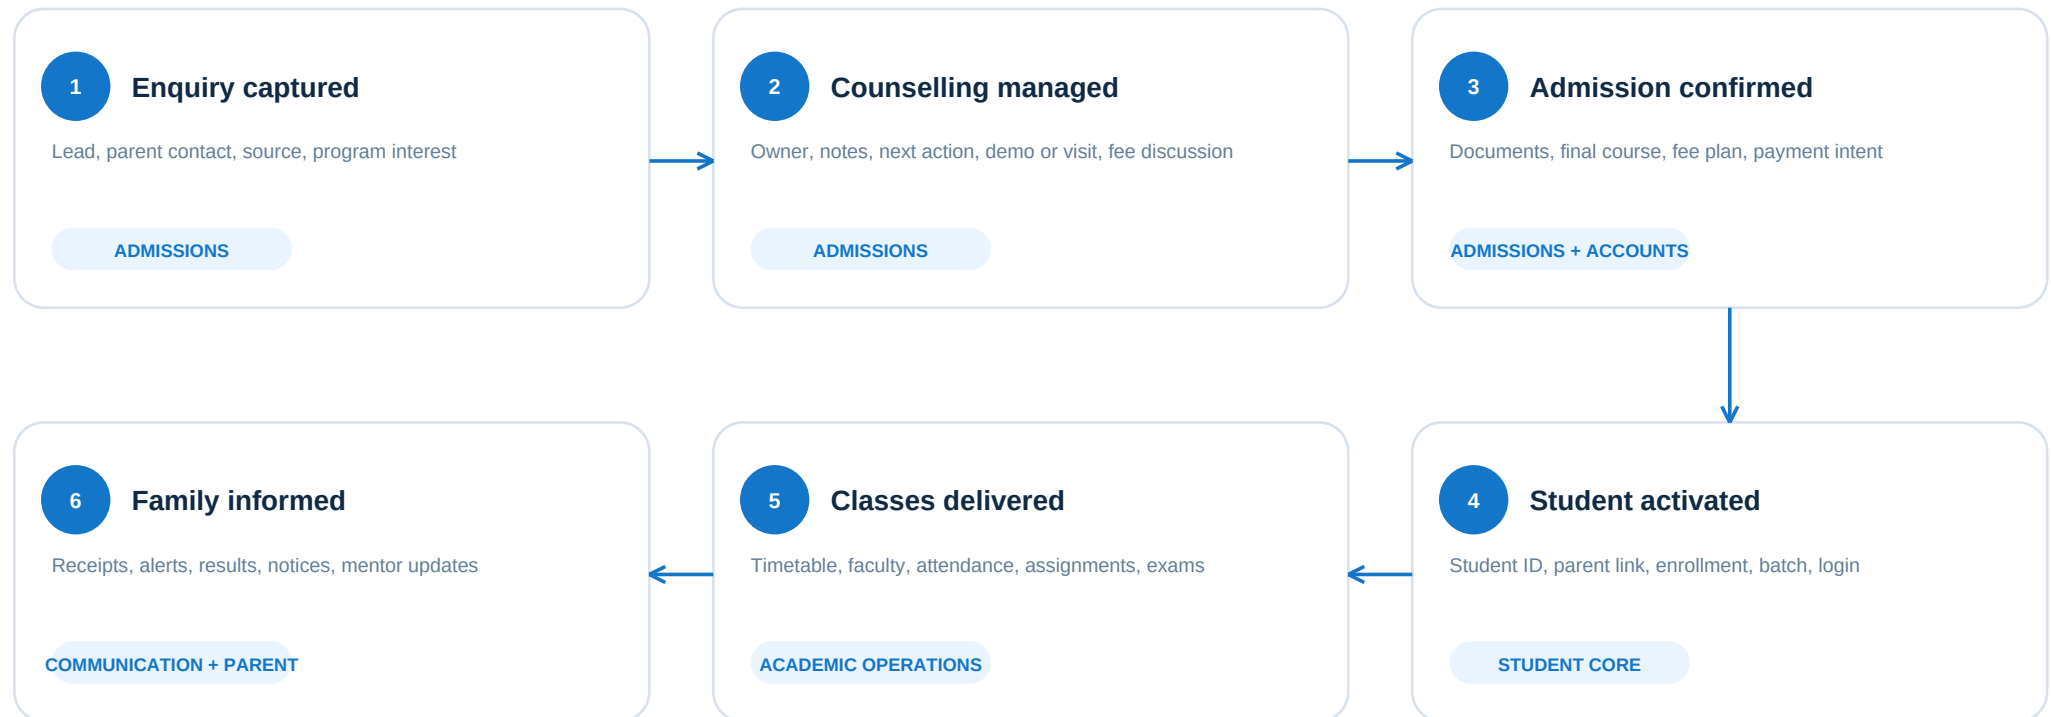

Parent App

attendance, fees, results, timetable

END-TO-END JOURNEY

The record grows as the student's relationship with Lakshya grows.

Each step adds verified information to the existing record. This stops repeated data entry, makes accountability visible, and allows the owner to see the current state of the institution in one place.

CROSS-MODULE RULES

Lead history stays intact

A converted lead remains linked to the student profile for source and conversion reporting.

Batch is the operational spine

Timetable, faculty assignment, attendance, exams, and batch performance all reference the same batch.

Events trigger action

Absence, fee due date, result publication, and lead follow-up can create messages, tasks, and dashboard alerts.

MODULES 01 - 05

The first five workspaces establish operational control.

01. Owner Dashboard

PRIMARY OWNER: OWNER / DIRECTOR

FEATURES

- Enrollment base, cash in month, class presence
- Executive priorities, growth funnel, portfolio mix
- Watchlist for dues, faculty load, academic risk

WRITES Aggregated KPIs and alerts

FEEDS Reports, owner approvals, decision queue

02. Admissions CRM

PRIMARY OWNER: COUNSELLOR / ADMISSIONS MANAGER

FEATURES

- New lead form with student, parent, source, program and owner
- Stage pipeline, filters, lead desk, notes and next action
- Counselling, demo, negotiation, follow-up and conversion

WRITES Leads, tasks, notes, follow-ups, source attribution

FEEDS Student core, fees, communication, dashboard

03. Student Records

PRIMARY OWNER: ADMIN / ACADEMIC COORDINATOR

FEATURES

- Single student profile with parent, batch, attendance, fee and test snapshot
- Academic action notes and parent preferences
- Documents, enrollment status, student access

WRITES Students, parents, enrollments, documents

FEEDS Attendance, fees, academics, parent app, reports

04. Attendance

PRIMARY OWNER: FACULTY / COORDINATOR

FEATURES

- Batch-wise strength, present, late, absent and auto action
- Daily attendance summary and repeat absence review
- Parent alert and mentor escalation triggers

WRITES Class sessions, attendance marks, absence events

FEEDS Student profile, communication, reports

05. Fees and Finance

PRIMARY OWNER: ACCOUNTS

FEATURES

- Fee plans, total, paid, due and next due date
- Collection versus target, outstanding and recovery visibility
- Concession / scholarship monitoring and receipts

WRITES Fee plans, invoices, payments, receipts, concessions

FEEDS Student profile, communication, owner reports

MODULES 06 - 11

Academic quality, inventory, communication and leadership share controlled institute data.

06. Academics and Exams

PRIMARY OWNER: ACADEMIC COORDINATOR

FEATURES

- Exam calendar for mock tests, OMR, analytics and parent summary
- Batch average, top score, weak subject and corrective action
- Batch assignments with shared links, due dates and completion tracking

WRITES Exam schedules, marks, assignments, external links

FEEDS Student profile, parent app, communication, reports

07. Faculty and Timetable

PRIMARY OWNER: ACADEMIC COORDINATOR

FEATURES

- Faculty subject, batches, hours per week, utilization and next class
- Room / time capacity and timetable health notes
- Faculty assignment publishing for assigned batches

WRITES Faculty records, subject mapping, timetable, class sessions

FEEDS Attendance, academics, parent timetable, reports

08. Communication Hub

PRIMARY OWNER: ADMISSIONS / ADMIN / ACADEMIC TEAM

FEATURES

- New-lead, absence, fee-reminder and result journeys
- WhatsApp / SMS broadcast log with delivery and owner
- Templates, escalation rules and communication audit

WRITES Templates, message jobs, delivery logs, consent

FEEDS Lead profile, student profile, reports, parent app

09. Reports and Owner Views

PRIMARY OWNER: OWNER / ADMIN

FEATURES

- Admissions tracker, batch occupancy and faculty utilization
- Fee due ageing, inventory status and student performance trends
- Communication audit and monthly executive board

WRITES Saved report filters and export audit

FEEDS Reads all operational modules without duplicating data

10. Parent App and Settings

PRIMARY OWNER: PARENT / SYSTEM ADMIN

FEATURES

- Parent: attendance, fees, results, timetable, homework, doubts and PTM
- Admin: branches, courses, batches, fee plans, roles and campaign mapping
- Audit logs, export permissions, templates and escalation policy

WRITES Parent access, configuration, role and audit controls

FEEDS All modules use controlled master data and permissions

11. Inventory

PRIMARY OWNER: STOREKEEPER / ACCOUNTS / ADMIN

FEATURES

- Stock master, category, unit, vendor and reorder level
- Purchase inward, stock issue, return, adjustment and current balance
- Batch or student material issue with low-stock alerts

WRITES Items, vendors, movements and issue records

FEEDS Finance, academic operations, owner reports

AUTOMATION AND HANDOFF MAP

An action in one module creates the correct context in the next module.

Event	Recorded in	Data created or updated	Automatically visible to	Follow-up / output
New lead submitted	Admissions CRM	Lead, parent contact, source, program, owner	Lead desk, source analytics, counsellor queue	Acknowledgement + first task
Counselling update	Admissions CRM	Note, stage, next action, appointment	Owner queue, follow-up manager	Reminder until activity is completed
Admission confirmed	Admissions + Accounts	Student, parent link, enrollment, fee setup	Student record, batch allocation, owner dashboard	Welcome message + document checklist
Attendance marked absent	Attendance	Attendance mark and absence count	Student profile, mentor queue, parent app	Parent alert + escalation on repeat absence
Payment recorded / due	Fees and Finance	Invoice, payment, receipt, remaining balance	Student profile, accounts dashboard, reports	Receipt or due reminder
Exam results published	Academics and Exams	Marks, rank, weak subject, recommended action	Student profile, parent app, academic dashboard	Scorecard + intervention plan
Timetable changed	Faculty and Timetable	Class session, room, faculty, time	Faculty desk, attendance register, parent app	Schedule notice if needed
Assignment published	Faculty + Academics	Batch, assignment, shared link, due date, teacher	Enrolled students, parent app, academic dashboard	Batch notice + completion tracking
Stock received or issued	Inventory	Item, vendor, quantity, issue / return and balance	Finance, batch material issue, owner reports	Issue log or low-stock alert

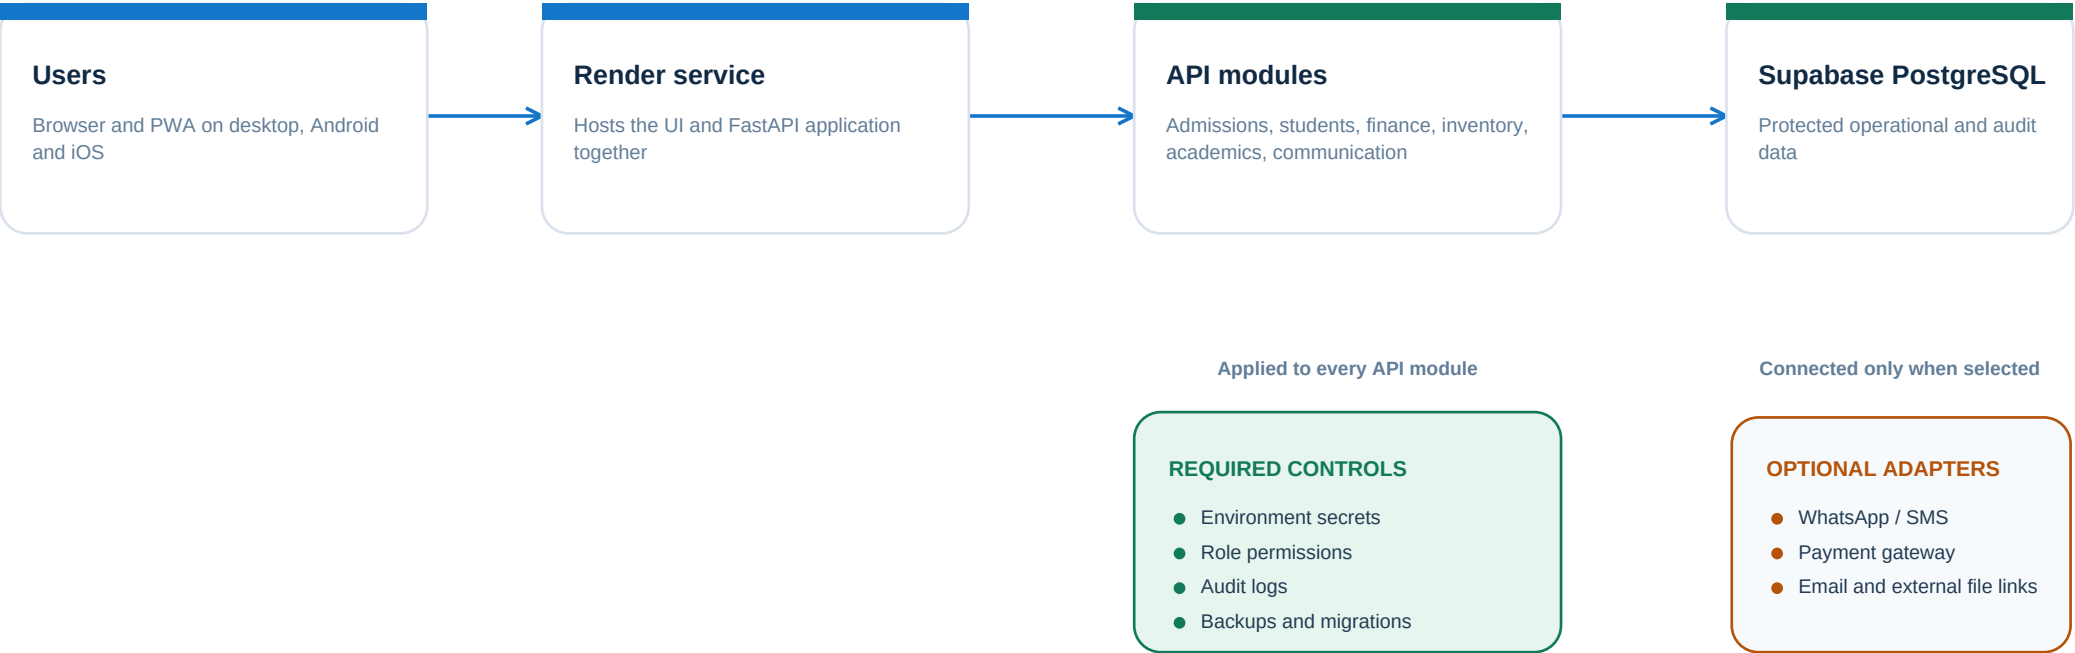

DESIGN RULE

Every message, report, alert, task and assignment is linked to its lead, student or batch record. This gives staff context and gives the owner an audit trail instead of scattered WhatsApp conversations and spreadsheets.

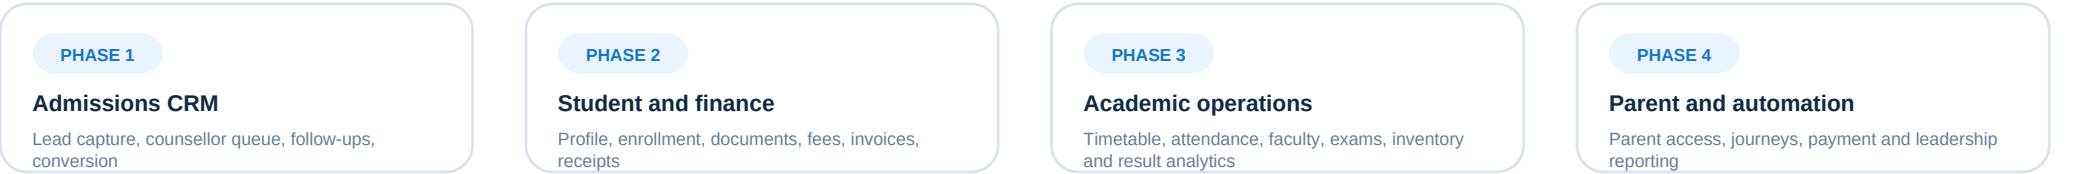

APPLICATION PLATFORM

One deployed application keeps launch simple. Modular boundaries keep growth safe.

Lakshya ERP begins as a single hosted application: the responsive frontend and FastAPI backend are delivered together, while PostgreSQL stores the protected institute record. External providers connect through adapters when selected.

BUILD SEQUENCE

PRODUCT EXPERIENCE

One product shell. One focused job on every screen.

Every role sees the same secure application structure, but only the work, records and actions relevant to that role. This keeps the ERP simple to learn and safe to operate.

DESKTOP WORKSPACE

fees, receipts, inventory

SCREEN DESIGN RULES

The design system makes every module feel like the same product.

Pages use the same spacing, labels, status language, actions and mobile behavior. A dashboard informs; a workspace completes work; a detail view explains one record.

1. Page header

Clear title, concise context and one visible primary action.

SHARED ACROSS ALL MODULES

2. Operations table

Filters above; records in rows; one action per row; mobile becomes compact cards.

SHARED ACROSS ALL MODULES

3. Detail and activity

Timeline, notes and decisions stay with the selected student, lead or transaction.

SHARED ACROSS ALL MODULES

4. Guided form

Visible labels, inline validation and grouped steps for longer staff workflows.

SHARED ACROSS ALL MODULES

5. Status and alerts

Written status plus colour: Paid, Due today, Absent, Confirmed or Draft.

SHARED ACROSS ALL MODULES

6. Mobile and PWA

Drawer navigation, thumb-friendly actions, compact lists and offline shell support.

SHARED ACROSS ALL MODULES

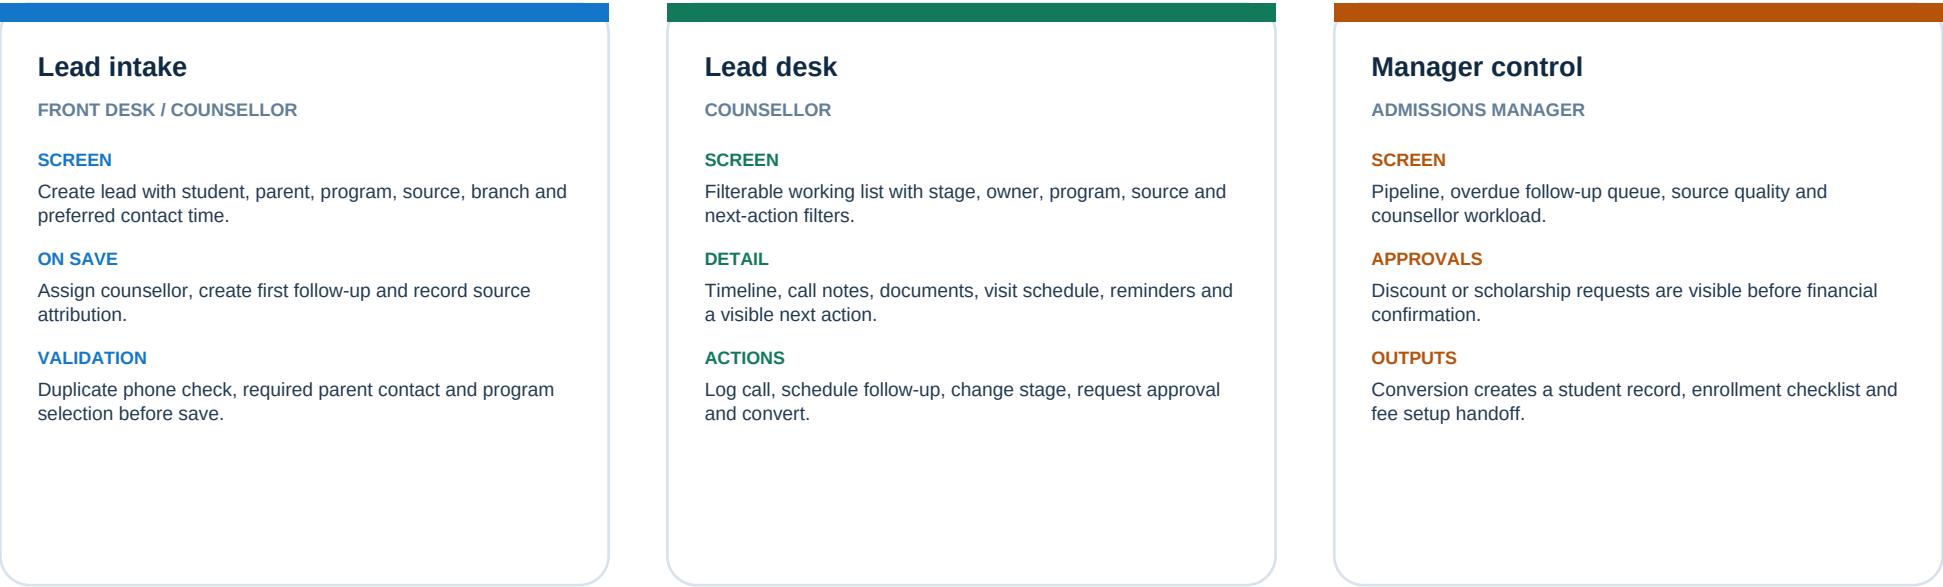

QUALITY STANDARD

Keyboard-friendly, WCAG AA contrast, visible focus states, responsive layouts and clear loading, empty and error states.

ADMISSIONS MODULE

The admissions team works from a queue, not a crowded dashboard.

Each lead has one owner, one next action and a complete visible history. Managers control the pipeline without interrupting counselling work.

SCREEN STATES

Empty: invite the team to create the first lead. Loading: preserve table structure. Duplicate: suggest the existing record. Permission denied: show who can approve the next action.

STUDENT OPERATIONS

The student profile is the shared reference point for daily operations.

Staff see only the data needed for their task. The system connects attendance, fees, academics and parent communication without duplicating student information.

Student profile

ADMIN / COORDINATOR

SCREEN

Identity, guardian, enrollment, documents, batch, access status and academic snapshot.

TABS

Overview, attendance, fees, academics, communication history and documents.

ACCESS

Staff see role-relevant sections; parents only see their linked child record.

Attendance

FACULTY / COORDINATOR

SCREEN

Batch register with present, late, absent and exception reasons in one quick action flow.

RULES

Repeat absence creates a mentor review and optional parent notification.

OUTPUTS

Daily summary, attendance percentage and student history update instantly.

Fees and finance

ACCOUNTS

SCREEN

Fee plan, invoices, receipt history, outstanding balance, due date and concessions.

ACTIONS

Record payment, issue receipt, mark adjustment and request concession approval.

OUTPUTS

Student view, parent receipt, due reminder, collection dashboard and audit trail.

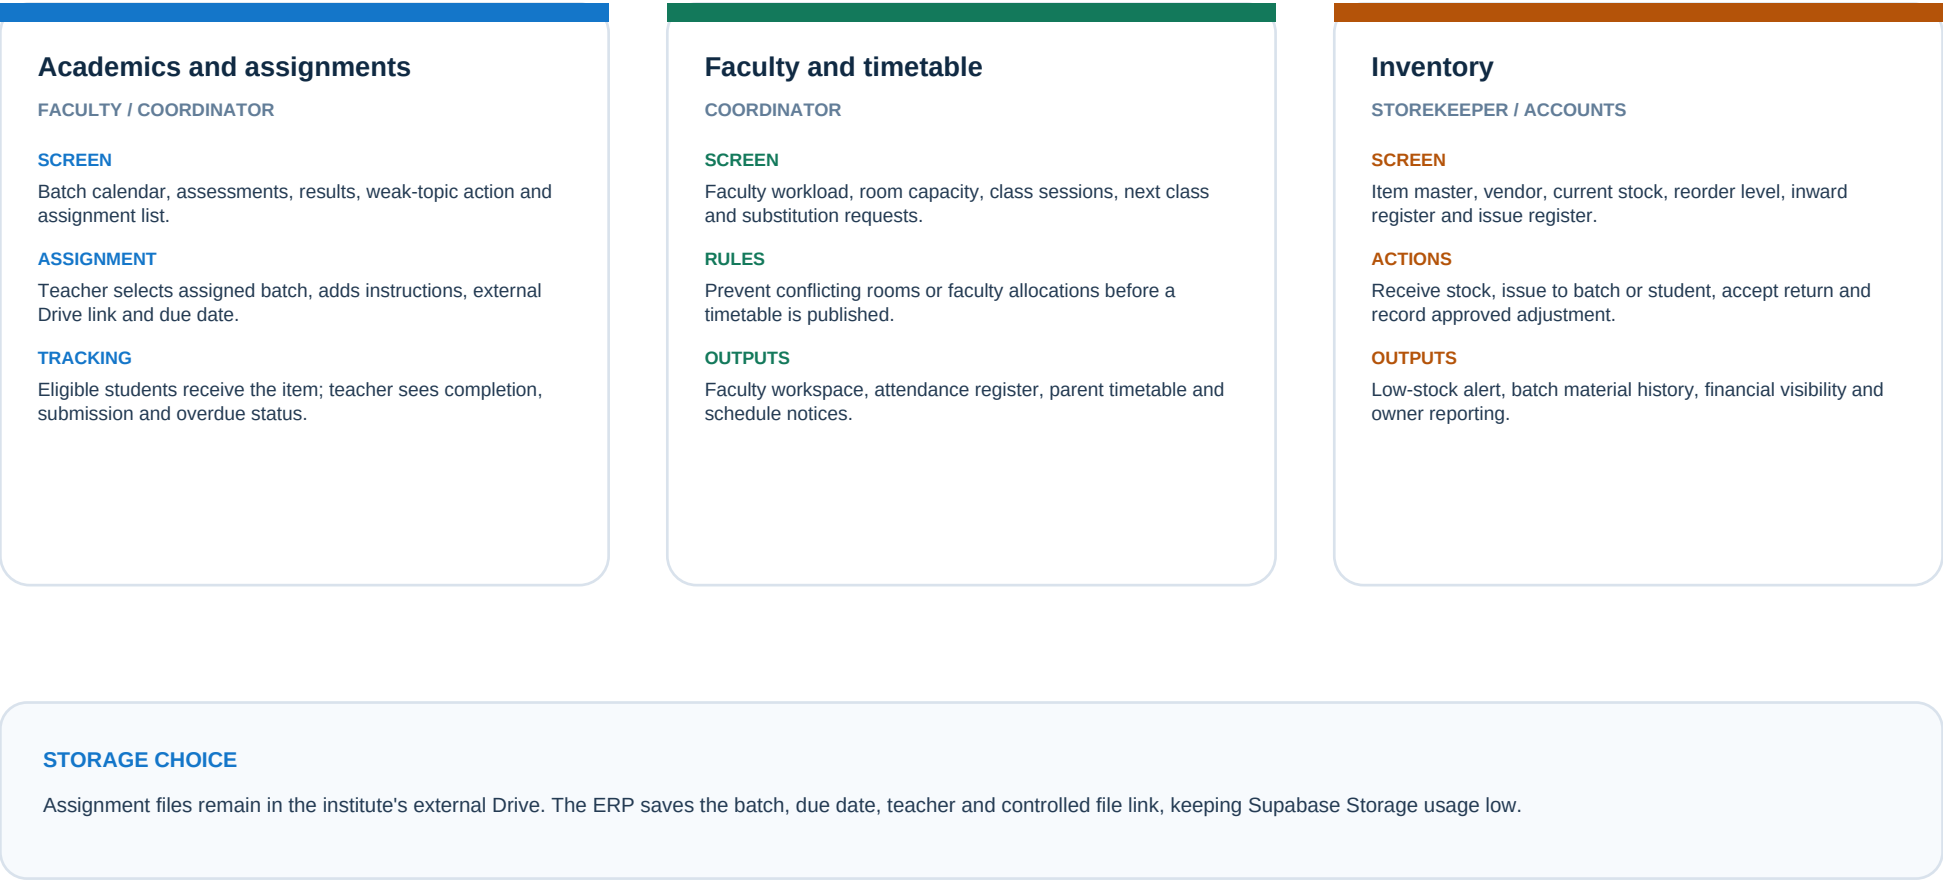

DATA RULE

Admissions creates the student only once. Attendance, finance and academics attach controlled records to that student and enrollment rather than making independent copies.

ACADEMIC OPERATIONS

A batch connects faculty, timetable, learning work, students and materials.

Teachers publish only to their assigned batches. Students see work for their own active batch; coordinators see completion, risk and delivery quality without managing every class manually.

CONNECTED CHANNELS

The ERP communicates with context, not scattered messages.

Communication is triggered by approved events and permission rules. Parents receive only their child's information; leadership sees trends and exceptions, not raw operational clutter.

Communication hub

ADMIN / ADMISSIONS / ACADEMICS

JOURNEYS

New enquiry, attendance absence, fee due, result published, timetable change and assignment notification.

CONTROLS

Templates, consent, recipient preview, delivery log, retry state and escalation rules.

AUDIT

Every message records source event, recipient, channel, delivery status and acting user.

Parent app

PARENT

HOME

Attendance, fees, receipts, results, timetable, assignments, notices, doubts and PTM requests.

PRIVACY

A parent sees only linked children and only information released by institution permissions.

MOBILE

Large actions, compact records, download links and optional PWA offline shell.

Reports and owner views

OWNER / DIRECTOR

DESIGN

Executive summary with admissions funnel, collection, attendance, performance, faculty utilization, inventory and watchlist. Detailed reports open only when required.

Settings and audit

SYSTEM ADMIN

DESIGN

Branches, programs, batches, fee plans, users, roles, templates and approval rules. Every sensitive change is timestamped and attributable.

EXPERIENCE AND CONTROL

The software is designed for real staff work on laptops and phones.

Mobile is not a compressed desktop screen. The interface changes intentionally so primary actions, records and alerts remain clear on smaller devices.

Mobile and PWA ALL ROLES NAVIGATION Records Offline	Permissions and safety SYSTEM ADMIN ACCESS AUDIT PROTECTION	Quality states EVERY MODULE ACCESSIBILITY RELIABILITY PERFORMANCE
---	---	---

DEFINITION OF READY

A feature is ready only when its role permission, desktop and mobile views, validation, empty state, error state, audit behavior and handoff to the next module are verified.

IMPLEMENTATION DESIGN

We build the connected journey in practical, testable releases.

The first release begins with admissions, then expands through the confirmed student journey. Each phase is accepted against the screens, permissions, records and handoffs described in this document.

RELEASE 1

Admissions foundation

Lead intake, counsellor queue, notes, follow-ups, conversion, owner review and audit trail.

RELEASE 2

Student and finance

Student profile, batch allocation, documents, fee plan, invoices, receipts and parent-ready records.

RELEASE 3

Academic operations

Timetable, faculty, attendance, assessments, assignments with external links, results and inventory controls.

RELEASE 4

Connected channels

Parent app, communication journeys, reports, approvals, mobile polish and controlled integrations.

ACCEPTANCE FOR EVERY RELEASE

Role-based access, real data flow, mobile check, audit trail, empty/error states and client walkthrough approval.

INVENTORY MODULE

Every item is traceable from inward receipt to issue, return or adjustment.

Inventory is an independent operational module. It prevents stock uncertainty, links teaching materials to batches and gives accounts and owners accurate visibility without manual spreadsheets.

Stock master

STOREKEEPER / ADMIN

SCREEN

Item name, category, unit, vendor, opening balance, reorder level and current stock.

CONTROLS

Unique item code, active or inactive state, approved unit of measure and reorder threshold.

VIEWS

Stock summary, low-stock list, item history and vendor-wise purchase reference.

Inward and purchase

STOREKEEPER / ACCOUNTS

SCREEN

Purchase inward register with vendor, invoice reference, item, quantity, rate and received date.

ACTIONS

Receive full or partial quantity, attach reference link if needed and record delivery variance.

HANDOFF

Updates stock balance, creates finance visibility and keeps a permanent inward history.

Issue, return and adjustment

STOREKEEPER / FACULTY

SCREEN

Issue items to a batch, individual student, faculty member or internal department.

ACTIONS

Issue, return, write-off or request approved adjustment with a reason and quantity.

CONTROLS

Block negative stock, show available quantity and require approval for manual adjustments.

INVENTORY DATA FLOW

Inward receipt → Stock balance → Batch or student issue → Low-stock alert → Finance and owner reports

Every movement saves item, quantity, source or destination, acting user, time and reason. The batch issue history gives academic teams context; collection and purchase visibility supports finance; the owner sees exceptions and inventory health.
