

Lakshya ERP

Product design specification

A clear view of what the institute will operate: admissions, student records, academics, finance, inventory, communication and parent access.

What this document confirms

- The workspace each team uses and the actions they can perform.
- How an enquiry becomes a student and then moves through daily operations.
- How the system protects permissions, records history and supports mobile work.

SYSTEM ARCHITECTURE

Every team uses a focused workspace connected to shared institute data.

The owner sees decisions and exceptions, while operational teams complete their work inside dedicated modules. The same student, batch, finance and stock records move safely across the system.

OPERATING MODEL

The ERP follows one connected student journey.

Teams work in focused modules, while leads, students, guardians, batches and financial records remain shared and consistent across the institute.

PRODUCT-WIDE DESIGN RULES

- One record: modules reference the same student, parent, course and batch instead of creating copies.
- Focused workspaces: dashboards summarize performance; queues are used to complete daily work.
- Traceable changes: admissions, payments, stock and approvals keep user, date, reason and history.
- Mobile-ready: smaller screens use a drawer, compact records, large actions and clear saved/error states.

INCLUDED DESIGN

The team works from an action queue, not a crowded dashboard.

Lead intake

FRONT DESK / COUNSELLOR

SCREEN

Student and guardian details, program interest, source, branch and first note.

ACTIONS

Create lead, check duplicate mobile, assign counsellor and set first follow-up.

Lead desk

COUNSELLOR

SCREEN

Filterable queue by stage, owner, program, source, priority and next action.

ACTIONS

Log calls, write notes, schedule follow-up, change stage and request approval.

Conversion review

ADMISSIONS MANAGER

SCREEN

Course, branch, batch, documents, admission date and fee-plan handoff.

ACTIONS

Confirm conversion or keep documents pending with a visible owner.

CONTROL

A lead cannot be converted until the essential guardian, course, branch, admission date and document checks are complete. Conversion creates the student and enrollment draft without re-entering data.

INCLUDED DESIGN

The student profile is the shared reference point for staff and parents.

Student profile

ADMIN / COORDINATOR

SCREEN

Identity, guardians, enrollment, documents, academics, finance and communication history.

ACTIONS

Edit permitted details, verify document reference, allocate or transfer batch.

Attendance

FACULTY / COORDINATOR

SCREEN

Class roster with present, late, absent and exception states.

ACTIONS

Mark register, add reason, submit; authorised corrections keep an audit record.

Fees and finance

ACCOUNTS

SCREEN

Fee plan, invoices, receipts, outstanding balance, concessions and payment history.

ACTIONS

Record payment, issue receipt, request/approve a concession or adjustment.

HANDOFF

A confirmed payment updates the student ledger, receipt view, collection reporting and permitted reminder flow. Payments are never deleted; refunds or reversals remain separate traceable entries.

INCLUDED DESIGN

Teachers publish work only to the batches and subjects they are assigned.

Batch workspace

FACULTY / COORDINATOR

SCREEN

Calendar, active students, subjects, upcoming sessions, assignments, exams and risk signals.

ACTIONS

Open class, review completion and publish permitted learning work.

Assignments and exams

FACULTY / COORDINATOR

SCREEN

Assignment title, instructions, due date, student status, marks and weak-topic review.

ACTIONS

Publish, review submissions, enter marks and release results after approval.

Faculty and timetable

COORDINATOR

SCREEN

Faculty workload, rooms, batch schedule and substitution/conflict review.

ACTIONS

Create, move or publish sessions after room and faculty conflict checks.

ASSIGNMENT STORAGE

The ERP saves assignment details, batch eligibility, due date and student status. Files stay in the institute's controlled external Drive link, avoiding unnecessary Supabase file storage.

INCLUDED DESIGN

Every item is traceable from inward receipt through issue, return or approved adjustment.

Stock master

STOREKEEPER / ADMIN

SCREEN

Item code, category, unit, vendor, opening balance, current stock and reorder level.

ACTIONS

Create/edit item, maintain active status and review item history.

Inward and purchase

STOREKEEPER / ACCOUNTS

SCREEN

Vendor, invoice reference, item lines, quantity, rate and received date.

ACTIONS

Record full/partial inward and preserve the permanent purchase reference.

Issue, return and adjustment

STOREKEEPER / FACULTY

SCREEN

Issue destination, quantity, purpose, batch/student/faculty link and return state.

ACTIONS

Issue/return items; request approved write-off or adjustment with a reason.

INVENTORY DATA FLOW

Inward receipt -> stock balance -> batch or student issue -> low-stock alert -> finance visibility and owner reporting. Negative stock is blocked and each movement records actor, time and reason.

INCLUDED DESIGN

Communication is event-led and parents see only their verified linked child records.

Communication hub

ADMIN / MANAGERS

SCREEN

Templates, approved audience, delivery queue, consent state and delivery history.

ACTIONS

Preview, send/schedule authorised messages and inspect retry/failure state.

Parent app

PARENT / STUDENT

SCREEN

Attendance, fees, receipts, timetable, assignments, results, notices and requests.

ACTIONS

Open controlled links and submit permitted support or PTM requests.

Owner reporting

OWNER / DIRECTOR

SCREEN

Admissions funnel, collections, attendance, academic risk, faculty load and inventory health.

ACTIONS

Drill into role-permitted reports, exceptions and action queues.

OPTIONAL ADAPTERS

WhatsApp, SMS, email and payment gateways can be connected when required. The core ERP works without locking the institute into recurring integration costs.

INCLUDED DESIGN

The product protects real data while keeping daily staff work clear on laptop and mobile.

Role permissions

ALL USERS

SCREEN

Role, branch scope and record-level access set by system administration.

CONTROLS

Backend validates every action; hidden buttons alone never grant access.

Mobile and PWA

ALL USERS

SCREEN

Navigation becomes a drawer; records become compact cards with one next action.

CONTROLS

Large touch areas, visible status, optional offline shell and sync confirmation.

Quality states

EVERY MODULE

SCREEN

Loading, empty, saved, error, duplicate and permission-denied experiences.

CONTROLS

Readable contrast, keyboard focus, labels, validation and stable layouts.

DEFINITION OF READY

A feature is complete only after the role permission, data validation, desktop/mobile behavior, audit trail, success/error states and handoff to the next module are verified.

BUILD PLAN

The product is delivered in practical, testable releases.

RELEASE 1

Admissions foundation

Lead intake, counsellor queue, notes, follow-ups, conversion, approval and audit trail.

RELEASE 2

Student and finance

Student profile, enrollment, documents, batch allocation, fees, invoices, receipts and parent-ready records.

RELEASE 3

Academic and inventory operations

Timetable, attendance, faculty, assignments with external links, exams, results and inventory controls.

RELEASE 4

Connected experience

Parent access, communication journeys, leadership reports, approvals, mobile polish and selected integrations.

ACCEPTANCE FOR EVERY RELEASE

Role-based access, real data flow, audit history, desktop and mobile checks, loading/empty/error states, and a client walkthrough approval.
